ABLOY® product range includes high security coin-operated locks ideal for securing locker doors in sports centres, supermarkets, bus and railway stations, hospitals and a number of other applications where high security is needed. ABLOY® coin-operated locks are your best choice for several reasons:

- ABLOY® cylinder mechanism is based on rotating detainer discs guaranteeing the optimum protection against picking.
- Additional keys can be supplied depending on the original security level provided.

- ABLOY® features wide master keying possibilities.
- ABLOY® coin-operated lock is available either with a coin tray or a coin box.
- Abloy Oy offers high quality products with professional maintenance and service through the international network of distributors.

ABLOY® SC400, SC401, SC402, SC403

The ABLOY® coin-operated lock is easy to use. After the correct coin has been inserted into the slot and the key has been turned to locked position, the key can be withdrawn from the lock. The lock can be modified to operate with different kinds of coins by replacing the coin-identifier. The lock is installed inside the door with three screws and can be used in right-handed doors (SC400, SC401) and in left-handed doors (SC402, SC403).

As standard the coin-operated lock is delivered either with a coin tray (Part No. 800595), whereby the customer gets the coin back when opening the lock, or with a coin box (Part No. SC404), whereby the coin remains within the coin box to be collected by the owner of the locker.

The cylinder housing is of chrome-plated zinc. The lock body and coin box are made of zinc plated steel coated with black polyurethane paint. The coin tray is steel, also coated with black polyurethane paint. The steel bolt has a nickel plating.

When contacting us please specify the coin with which the lock is to be operated and whether you wish to have the lock with a coin tray or a coin box. Please also specify whether the coin box locks are to be keyed alike and the number of keys required.
